ALL PRODUCT SYSTEMS AT A GLANCE

7. MANUFACTURED PRODUCTS

For more than 50 years we produce special building materials for the rehabilitation, renovation and modernization. With requested inventions regarding building protection and rehabilitation, our family business presents itself in clear outline as a think tank. Besides standard products proven a thousand times, we develop individual solutions for our customers.

8. FURTHER TRAINING

Expert knowledge in mould and health, sealing, rehabilitation of structurally sound buildings that have deteriorated, and listed buildings: further training plays an important part at *epasit*. Besides regular training of field staff, we offer seminars and workshops for our customers either on a local basis or in our perfectly equipped information center „kic“ in Altlingen.

9. COMPETENCE TEAM

Do you want to learn more? Our competent team for building materials is at your disposal either by calling +49(0)7032 2015-281 or by e-mail. We would also be pleased to advise you on your site.

We are looking forward to hearing from you!

ALL PRODUCT SYSTEMS AT A GLANCE

1. CONSTRUCTION SEALING

MineralDicht® is the sealing system for all types of loads from simple soil moisture to pressing water. It can be processed vertically and horizontally without problems, it lets through water vapour and is at the same time waterproof. The system protects buildings from penetrating water and moisture and is optimally sound for humans and the environment.

2. REHABILITATION OF CONSTRUCTIONS

MineralSanoPro® is the unparalleled and long-time-tested system for the rehabilitation of moist masonry, which is affected by salt. It stops dilapidation and regulates moisture. With its high pore volume, a limited absorptive capacity and a good water vapour permeability it causes the natural dehydration of the walls. The system of renovation mortar fulfills all requirements of the WTA, of the Monument Protection Authority, and of the DIN EN 998-1 standard.

3. INTERIOR INSULATION AND PREVENTION OF MOULD

Framework, preservation of monuments or damages caused by moisture: there are many good reasons for an energetic rehabilitation with epatherm®. The system of climate boards insulates and creates healthy room air conditions. The boards are incombustible and their alkalinity prevents mould growth. epasit is a recognized product partner of the Sentinel-Haus Institut and fulfills its strict quality standards for healthy building materials.

4. REHABILITATION OF SANDSTONE

With the sandstone system of renovation mortar 2000 you can repair, replace, and imitate natural stone. The colour and structure of its components durably match with the original material. It can be processed easily and fulfills all requests regarding the preservation of monuments. Further advantages are that the material sticks to every mineral substrate without any anchorage and shows the same properties like the stone.

5. COATING FOR DRINKING WATER TANKS

Mineral mortar convinces by an easy processing, a long product life and a high resistance. The top 300 is considered one of the mortars with the best performance on the market, it is exceptionally high-yielding and profitable. Other advantages are its low elastic modulus and its outstanding setting, which guarantees a quick return to service of the water tank.

6. BUILDING MATERIALS FOR GARDENING AND LANDSCAPING

Mineral building materials provide safety in gardens, are ecofriendly and may be matched individually in colour and structure. They are ideal for sealing ponds and wells, constructing and plastering walls, grouting paths and concreting foundations. Pointing mortar, for example, is extremely capable of bearing and carefree, because neither weed nor algae grow on it.
